RASUL IGITOV

SOC Analyst | Threat Detection & Incident Response

Baku, Azerbaijan | +994 50 800 55 92 | igitovrasul84@gmail.com

PROFESSIONAL SUMMARY

SOC Analyst with hands-on experience in SIEM engineering, threat detection, incident analysis, and vulnerability assessment, developed through the Millisec Cybersecurity Training Program and currently applied as a Blue Team Mentor. Skilled in Splunk, Wazuh, Sigma, Active Directory, Bitdefender XDR, and threat intelligence platforms including MISP and OpenCTI. Completed extensive practical training on TryHackMe (Premium) and LetsDefend, covering SOC alert triage, incident response, digital forensics, phishing investigation, and malware analysis across Red Team, Blue Team, and Network Security paths. Experienced in building and securing enterprise-style infrastructure, integrating security tooling, and developing detection rules to strengthen monitoring capability.

WORK EXPERIENCE

Blue Team Mentor | Hamburg IT Baku

Aug 2026 – Present

- Mentor junior learners in Blue Team fundamentals: SOC alert triage, log analysis, and incident response workflows.
- Guide hands-on work with Splunk (SPL), Wazuh, and MITRE ATT&CK mapping.
- Review phishing investigations and incident reports, giving feedback on evidence and documentation quality.
- Teach detection engineering basics, including writing and tuning Sigma rules.

CORE SKILLS

SIEM & Detection: Splunk, SPL, Sigma rules, Splunk MLTK, Wazuh
Endpoint & Network Security: Bitdefender XDR, Suricata IDS/IPS, WAF (Sucuri)
Threat Intel & IR: OpenCTI, MISP, AlienVault OTX, AbuseIPDB, MITRE ATT&CK, IOC analysis
Infrastructure: Active Directory, GPO, LAPS, Windows/Linux, SCCM
Vulnerability & Adversary Simulation: Nessus, Acunetix, Cobalt Strike, custom malware simulation (C#)
Data Security: iRedMail (TLS/SPF/DKIM/DMARC), BitLocker, backups
Automation: PowerShell, REST APIs, Task Scheduler

PRACTICAL TRAINING PLATFORMS

- **TryHackMe (Premium)** – Completed full Network Security, Red Team, and Blue Team learning paths, plus additional rooms in incident response, digital forensics, and malware analysis.
- **LetsDefend** – SOC Analyst simulations: alert triage, log analysis, phishing investigation, and incident escalation workflows.
- **Security Blue Team (BTL1)** – Completed all 6 hands-on domains: Security Fundamentals, Phishing Analysis, Threat Intelligence (MISP), Digital Forensics, SIEM Investigation (Splunk), and Incident Response, including the practical incident response exam.

PROJECTS & HANDS-ON LAB

R.I.S.K. Information Security Internship Program – Practical Assessment 2026

Timed technical assessment for the Blue Team track as part of the internship selection process.

- Reconstructed and documented the chronological stages of a multi-step attack through log file analysis.
- Performed behavioral analysis of a provided executable, identifying its actions and reporting findings with supporting evidence.
- Investigated a phishing email scenario, tracing indicators and documenting the investigation process.
- Compiled a full evidentiary report with screenshots and supporting artifacts for all completed tasks.

Millisec Cybersecurity Training Program – Independent Practical Training 2025 – 2026

Structured hands-on program covering SOC operations, enterprise infrastructure security, and adversary simulation.

- Built a Splunk-based SIEM integrating Sigma detection rules and Splunk MLTK to identify OWASP Top 10 vulnerabilities and anomalous network behavior.
- Deployed OpenCTI and integrated threat feeds from MISP, AlienVault, and AbuseIPDB to automate blocking of malicious IPs and file hashes via scripting.
- Set up a Service Desk ticketing workflow with defined SLAs and incident response templates to triage and manage security alerts.

- Designed a secure Active Directory environment with custom GPOs enforcing LAPS, BitLocker encryption, strict password policies, and macro blocking.
- Implemented endpoint and network protection using Bitdefender GravityZone XDR, Suricata IDS/IPS, and Sucuri WAF with geo-blocking.
- Secured enterprise email by configuring an iRedMail server with enforced TLS, SPF, DKIM, and DMARC to prevent spoofing and phishing.
- Deployed a T-Pot honeypot to collect attacker telemetry and automated export of malicious IPs to the WAF blocklist.
- Conducted vulnerability assessments using Nessus and Acunetix, analyzed findings, and supported remediation of identified weaknesses.
- Developed malware simulation tools and performed adversary emulation with Cobalt Strike to validate SIEM and XDR detection effectiveness.

EDUCATION

B.Sc. in Information Security (In Progress) – Azerbaijan Technical University, 2023 – 2027
Advanced Cybersecurity Training (Blue Team) – Millisec, 2025 – 2026
